21 August 2026

WEBSITE DEVELOPMENT PROPOSAL

A Proposal for the Design and Development of a Professional Website for Abby Luxe Hair

1. ORGANISATION OVERVIEW

1.1 Name of Organisation

For my website development, the organisation I am choosing is Abby Luxe Hair.

1.2 Brief History

Abby Luxe Hair is a small business which sells wigs and hair care products. The business has been set up in order to offer customers quality hair products at affordable prices. The business concentrates on customers who have interest in hair, beauty and maintaining good looks at affordable cost.

Having a website would help this business become professional and make it easy for customers to get information on their products as the business expands.

1.3 Mission Statement

The mission of Abby Luxe Hair is to offer customers quality and affordable wigs and hair care products and help them look good and feel confident and comfortable with their looks.

1.4 Vision Statement

The vision of Abby Luxe Hair is to become a recognised brand in the field of hair and beauty with quality products, excellent services and affordable prices.

1.5 Target Audience

The primary target audience of Abby Luxe Hair comprises women and youth who have interest in wigs, haircare products, and beauty.

The website will primarily aim at:

- * Women who use wigs.
- * Youth with an interest in beauty and hair.
- * Professional women seeking convenient hair products.
- * Consumers seeking affordable wigs.
- * People who discover products via social media.

2. GOALS AND OBJECTIVES OF THE WEBSITE

The primary objective of the website will be to provide professional online visibility for Abby Luxe Hair. The website will also make it easier for customers to view the products and reach out to the company.

2.1 Goals

The primary goals of the website will be:

- * To increase the visibility of Abby Luxe Hair online.
- * To display the wigs and hair care products.
- * To provide additional information about the company.
- * To provide an easy way to contact the company.
- * To increase customer inquiries and potential sales.
- * To link the website with social media profiles.
- * To build trust among the potential customers.

2.2 Objectives

The website must be user-friendly and responsive to both computer screens and mobile devices.

The website will be aimed at having:

- * Clear information about the products.
- * Simple navigation.
- * Contact details.
- * Social media links.
- * Clear buttons like “Shop Now” and “Contact Us”.
- * Easy to find the desired products.
- * Good first impression of the company.

2.3 Key Performance Indicators (KPIs)

The performance of the website will be evaluated by various KPIs.

KPI How it will be measured

Website visits The number of people who visit the website

Views of the product The number of times the product is viewed

Inquiries The number of customers contacting the company

Social media clicks The number of people clicking social media links

Sales The number of sales from the website

Mobile visits The number of people on mobile devices

These measurements can help the business see whether the website is helping to attract customers.

3. CURRENT WEBSITE ANALYSIS

3.1 Current Online Presence

Abby Luxe Hair does not currently have a fully developed website that can act as the main online platform for the business. The business can therefore benefit from having a website where all the important information can be found in one place.

Social media is useful for advertising products, but a website can give the business more control over how its information and products are displayed.

3.2 Strengths

Some of the strengths of Abby Luxe Hair are:

- The business has a clear focus on hair and beauty products.
- Wigs are visual products that can be displayed well online.
- The business can use good-quality pictures to attract customers.
- Social media can be connected to the website.
- The business has the opportunity to create a strong brand identity.

3.3 Weaknesses

Some possible weaknesses are:

- Customers do not have one website where they can find all the information.
- Product information may not always be in one place.
- New customers may have difficulty finding information about the business.
- Customers may have to rely on social media to ask questions.

3.4 Improvements

The proposed website will improve these areas by providing:

- A homepage.
- An About Us page.
- A Products page.
- A Contact page.
- Product descriptions and pictures.
- Social media links.
- A WhatsApp/contact option.
- Easy navigation.

4. PROPOSED WEB PAGE FEATURES & FUNCTIONALITY

The website will contain various web pages which will provide information to the customers.

4.1 Home Page

The Home page will be the first page that the customer sees on visiting the website.

The features of the home page are:

- * Logo of Abby Luxe Hair.
- * Menu bar.
- * Image.
- * Introduction.
- * Featured products.
- * 'Shop Now' button.
- * Social media links.
- * Contact details.

4.2 About Us

About Us will provide additional information to the customers regarding Abby Luxe Hair.

The features are:

- * Background of the business.
- * Mission & Vision.
- * Information about offerings of the business.
- * Values of the business.

4.3 Products Page

Products page will display the products.

Products can be classified under:

- * **Wigs.**

- * **Hair care products.**

- * **New products.**

- * **Best seller products.**

Each product can contain the following features:

- * **Product Name.**

- * **Image.**

- * **Description.**

- * **Price.**

- * **Availability.**

- * **Contact/Enquiry Button.**

-

4.4 Contact Page

The Contact page will allow customers to get in touch with Abby Luxe Hair.

It will include:

- Contact form.
- WhatsApp contact.
- Email address.
- Social media links.
- Business hours.

4.5 Social Media

Links to social media platforms will be included so that customers can easily view the business's social media content and follow the pages.

5. DESIGN AND USER EXPERIENCE

5.1 Design

The website will have a modern and feminine look because the business is focused on hair and beauty products.

The design should look clean and professional without having too many things on the page.

The main colours will be:

- Dark pink.
- Black.
- Gold.
- White or cream.

These colours will help create a luxury feel while still matching the Abby Luxe Hair brand.

5.2 Typography

For the main text, I would use a simple font such as **Poppins** or **Montserrat** because they are easy to read.

For some headings, **Playfair Display** can be used to give the website a more elegant look.

The headings will be bigger than the normal text so that users can easily see the different sections of each page.

5.3 Layout and Design

The website will have a simple layout.

The homepage will be arranged in the following order:

Navigation → Main Image → Introduction → Products → Why Choose Us → Social Media → Contact → Footer

The website will also have enough space between sections so that it does not look overcrowded.

5.4 User Experience

The website needs to be easy for customers to use.

Some of the things I will focus on are:

- Simple navigation.
- Clear buttons.
- Easy-to-read text.
- Mobile-friendly pages.
- Clear product pictures.
- Easy access to contact information.

- Consistent colours throughout the website.

5.5 Low-Fidelity Wireframe

6. TECHNICAL REQUIREMENTS

6.1 Domain

A possible domain name for the website is:

www.abbyluxehair.co.za

The availability of the domain will need to be checked before purchasing it.

A [.co.za](http://www.co.za) domain would be suitable because Abby Luxe Hair is a South African business.

6.2 Hosting

The website will need a hosting service to make it available online.

The hosting should provide:

- SSL certificate.
- Enough storage.
- Good uptime.
- Backups.
- Email support.
- Enough bandwidth for a small business website.

6.3 Programming Languages

The website will use:

HTML – to create the structure of the website.

CSS – to design the website, including colours, fonts and layouts.

JavaScript – to add interactive features to the website.

6.4 Development Tools

The development can be done using:

- Visual Studio Code.
- GitHub.
- Web browsers.
- Browser developer tools.

The website will also be tested on different screen sizes to make sure that it works properly.

3M

7. TIMELINE AND MILESTONES

The project will be completed according to the timeline provided for the Web Development subject.

The dates for each stage will be adjusted according to the official submission dates for the Web Development subject.

3M

8. BUDGET

The following is an estimated budget for the website.

The prices are estimates and can change depending on the hosting company and the final requirements of the website.

For example, South African hosting providers offer different domain and hosting packages, so the final price would need to be confirmed when the website is ready to go live.
